

Viridian releases Architectural Glass Specifiers' Guide

CSR's recent acquisitions of Pilkington and DMS Glass, and the subsequent launch of Viridian, brought about the need for many changes; in particular, new product names needed to be developed to incorporate the new brand.

For speedy reference and sourcing the right product from the comprehensive range, Viridian has released a 132 page glass guide.

The **Architectural Glass Specifiers' Guide**, details Viridian's full product range, divided into eight benefit led categories for easy navigation: Core Products, Energy, Noise, Decorative, Fire Protection, Structural, Storm and Security.

Importantly, the guide also features a Product Matrix, allowing users to easily locate a new product by its former product name.

The guide's inclusion of a thermal performance chart ensures users will be able to select the right glass to meet their energy efficient needs, from Viridian's range of glass solutions. The charts list a wide variety of product combinations, accompanied by a clear overview of their daylight, solar and insulation performance capabilities.
