

VersiJack LH[®] - Low Height Decking & Paver Support

Elmich, a leading world-wide manufacturer and marketer of landscape engineering products, has introduced **VersiJack LH**, a stackable, low height support system for pavers, beams and decking at heights ranging from 22mm to 75mm. **VersiJack LH** has particular application in the construction of roof terraces, pedestrian walkways, roof gardens and balconies.

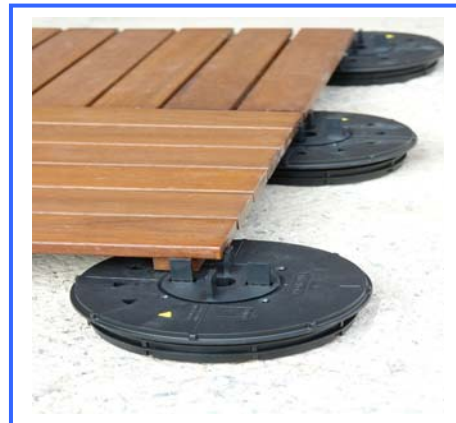

VersiJack LH support pavers, beams and decking at heights ranging from 22mm to 75mm.

VersiJack LH are easy to install and are an efficient and cost effective to brick, metal and timber support systems.

VersiJack LH are not mechanically fastened and allow easy access to waterproofing membranes and services, concealed within the cavity space.

VersiJack LH will support 3,000 kgs and an adjustable head compensates for slopes up to 5%.

VersiJack LH comprises several stackable components to achieve the required height. Rubber shims provide for fine adjustment, when required.

Applications

- Balconies and patios
- Decks and podiums
- Pool surrounds
- Courtyards
